DOGS

Bug Off Garlic Chewables for Dogs

A safe and effective all natural bug repellent.

Garlic is nature's insect repellent. All natural **Bug Off Garlic Chewables** offer you a convenient and safe way to protect your dog from fleas, ticks, and other biting insects. Best of all, they don't have the dangerous and painful effects common to spot-on chemicals for flea and tick control. **Bug Off Garlic Chewables** are made with beef liver and nutritional yeast for good flavor and whole food nutrition.

PRODUCT HIGHLIGHTS

- ▶ Provides a 24-hour shield against fleas, ticks, mosquitoes, gnats, etc.*
- ▶ Safe, effective alternative to chemical products
- ▶ Desiccated raw beef liver for great flavor
- ▶ One of the world's most powerful antioxidant foods
- ▶ Promotes friendly bacteria in the digestive tract*
- ▶ Provides four times more organic sulfur than any other food
- ▶ Stimulates immunity – antibacterial, antifungal, antiviral, & anti-parasitic*
- ▶ Contains natural MSM

COCKEYSVILLE, MD 21030

"...Wally was completely tick-free..."

Dear Springtime:

I recently took my dog, Wally, and my father's two dogs (a Lab & a Yorkie) out for a hike in the woods. Wally gets 6 chewable tablets of **Bug Off Garlic** a day. The Lab is on Frontline Plus and wears a Scalibor flea & tick collar, and the Yorkie only gets Frontline Plus treatments. Guess which dog had absolutely no ticks when we got home? That's right, Wally was completely tick-free, while both of my dad's dogs had numerous ticks on them. Thanks again for such a great product!

Sincerely,

Jessie Green, Maine

Wally

GUARANTEED ANALYSIS (per tablet)

Garlic granules	1,000 mg
Desiccated raw beef liver	350 mg
Nutritional yeast culture	350 mg

Ingredients: air-dried garlic granules, desiccated beef liver, nutritional yeast culture, dextrose, microcrystalline cellulose, and stearic acid.

REAL BEEF LIVER

Springtime uses beef liver in generous quantities to make our dog products easy to feed. The beef liver is from hormone-free cattle raised in pristine wild areas of Argentina. The beef liver is also loaded with essential vitamins and minerals dogs need.

DIRECTIONS: Just toss them into the regular feed ration. Tablets may be broken into pieces for small or sensitive dogs. Please introduce gradually (over 5-10 days). It may take 2-4 weeks to maximize protection. Year-round feeding is recommended.

Double or triple doses are recommended for areas of high infestation.

DOG SIZE	WEIGHT	DAILY DOSE
Toy	under 20 lb.	¼-1
Small	20-40 lb.	1-2
Medium	40-80 lb.	2-4
Large	80-120 lb.	4-6
Giant	over 120 lb.	6+

Nutritional Yeast Culture Is Nutrient-Dense and Enzyme-Active

Springtime chewables contain a nutritious type of yeast culture, called *saccharomyces cerevisiae*, which gives our chewables additional health benefits.

Springtime chooses to use nutritional yeast culture (*saccharomyces cerevisiae*) made by Red Star®, a complete protein and superfood containing 18 amino acids, B-complex vitamins, dietary fiber, as well as many other nutritional components and minerals. Red Star® Yeast, the largest manufacturer of yeast products in North America, has over 50 years of extensive experience in the development and production of nutritional yeast.

Springtime has used Red Star® nutritional yeast exclusively for more than 20 years.

What It Is

Red Star® nutritional yeast is grown specifically for its nutritive value. In addition to protein, dietary fiber, vitamins and minerals, it contains additional functional and beneficial components such as beta-1, 3 glucan, trehalose, mannan and glutathione.

Studies have shown potential health benefits, such as improved immune response and anti-cancer properties.

Studies have shown that these components have potential health benefits such as improved immune response, reduction of cholesterol, and anti-cancer properties. **A special drying process retains live food factors, a unique and valuable quality.**

What It Is Not

Candida yeast infection (*candida albicans*) is a body yeast infection. **Red Star®'s nutritional yeast (*Saccharomyces cerevisiae*) is not found to be a cause of yeast or candida infections.** ♦

Bug Off Garlic for Dogs

Real Letters from Real People

No more harsh chemical flea and tick treatments!

Adler, Bean, and Max

Dear Springtime:

Our family has been using **Springtime** products for over 20 years, and we keep coming back for more. We swear by the **Bug Off Garlic Chewables**. They have allowed us to completely move away from harsh chemical flea and tick treatments. We have five dogs in our home, and we haven't had a flea or tick issue. I think my son and I are the only ones who have had a tick on us! Perhaps we should take **Bug Off Garlic**, too! We keep trying to get our family and friends to give the pills a try. So many people have been brainwashed into thinking they need to treat their dogs with chemicals to have success, and it's simply not true.

Amber Verbeke, Kansas

Wonderful for dogs and goats!

Tricia with Lucy (left) & Molly (right)

Dear Springtime:

I just wanted to tell you about my wonderful experience with **Bug Off Garlic**. I have been using it for my dog and my goats since March. I was a little concerned about using it for the goats because we drink the milk. I thought it would have a garlicky taste. Well, to my surprise it does not have the least little bit of garlic flavor!

I haven't had any problems with flies biting them. The numbers in the barn have been drastically reduced to the point that I thought they actually hadn't really arrived yet until I talked to a friend who said otherwise. I usually also have mosquitoes because we have a lot of woods, and they are constantly landing on my goats and biting. Not this year!

Thank you for an amazing product!

Tricia Hoover, Pennsylvania

Tick Races to Get Off!

Dear Springtime:

Boogie, my red Cattle Dog, has been on **Bug Off Garlic** granules since she was a pup. Since then, I have seen only one tick on her, and it was racing down her back to get off as quickly as possible! Thank you so much for your wonderful products.

Beth Pinter, Wisconsin

EPA: Spot-on Pesticides Linked to Pet Death

Adverse reactions to topical flea and tick products prompt an investigation by the EPA.

Does your dog's flea and tick solution include warnings of potential side effects, such as skin ulceration, vomiting, diarrhea, and even death? If you are using a spot-on formula for flea and tick control, it probably should.

Since 2009, the U.S. Environmental Protection Agency (EPA) has been investigating topical or "spot-on" pesticides for pets in response to 44,000 complaints made to the EPA regarding the safety of these products in 2008 alone. Spot-on pesticides are chemicals applied from a small tube directly onto the pet, typically on the back of the neck, to control fleas and ticks. Because spot-on products are not given orally or by injection, they do not fall under the jurisdiction of the Food & Drug Administration (FDA); rather, they are under the supervision of EPA as a pesticide.

The EPA communicated its findings within its first report in 2010, which included the following effects found among dogs treated with spot-on chemicals:

"Clinical signs included such effects as vomiting, diarrhea, salivation, itching, hair loss, skin ulceration, lethargy, nervousness, ataxia, tremors, and seizure. Although most incidents were classified minor, all products had some deaths..."

~ EPA report on spot-on pesticides

The report found that inert ingredients used to aid in the application and dispersal of the pesticide might be the actual source of the harmful effects, rather than the pesticides themselves. The EPA concluded that negative side effects were more prevalent in smaller breeds and that dog weight is very important in determining the proper dosage.

The EPA is continuing to monitor spot-on products for additional safety determinations. The findings of

the 2010 report led to immediate changes in how the agency regulates these products and how companies label their products and report issues. Manufacturers now will be required to make packaging and labeling changes to help consumers provide safe dosages. Also, manufacturers will no longer be able to interchange the inert ingredients. The EPA is also making changes to how it regulates spot-on products, including the use of the FDA's requirements for pre-market clinical trials.

For some veterinarians and dog owners, these new measures are not enough. According to Dr. Karen Becker of the Healthy Pets website, "In my opinion, the risks of these products are simply too great to warrant their routine (monthly) use. I encourage my dog and cat owner clients to avoid these pesticides in favor of safer alternatives." ♦

Quick Tips to Evaluate Your Dog's Health

by **Trista Reeder, M.S., Ph.D.**

Dog Nutrition/Animal Science

Springtime Quality Control Manager

WEIGHT

Is your pet carrying too much weight? Leaner pets tend to be healthier and have fewer diseases. However, obesity can lead to diseases such as diabetes, arthritis, and heart conditions among others.^{1,2,3,4,5} In addition, that added weight could be aggravating already sore joints and potentially causing further damage. If your dog is too large to weigh at home, most veterinarians will allow clients to come in and check their pets' weight without an appointment or fee.

BODY CONDITION

Does your pet have a waist? Most people don't think about it, but your pet should have an hourglass figure. Stand over your dog and look down. If your dog's waist doesn't narrow at least a little bit before the hips, he/she may be carrying extra pounds. Now we look at the pet from the side—does his/her belly start to "tuck" behind the rib cage? You should be able to feel—but not see—your pet's ribs. If your beloved furry friend is "barrel" shaped, then it may be time to put the treats away. Please remember—you're the one in control of filling the food bowl, your pet is only in control of emptying it.

EARS

Looking down into your pet's ears—they should be clean and pale pink (or skin colored depending on breed and coat color). There should be no brown/black/waxy build-up. The ears should also be odor-free. Chronic ear goo could be another sign of allergies and you may want to consider upgrading the diet or adding a supplement containing a natural antihistamine such as bee pollen or spirulina (**Longevity™**, **Fresh Factors™**, etc.).

SKIN APPEARANCE & ITCHING

Itchy skin can be caused by a variety of factors. The first step is to ensure that your pet does not have fleas. By using a simple flea comb and running it through your dog's fur, you can check for fleas or "flea dirt." It's important to get the comb down to the skin as you brush it through, checking for tiny fleas or bits of black flea dirt. If you find either of these, a bath and daily **Bug Off Garlic** would be in order. Changing/cleaning the bedding would also be helpful.

If you don't find anything, it is possible your pet is suffering from allergies or simply dry skin. When you part your pet's fur and examine the skin underneath, the skin should be relatively pink (or comparable color, depending on coat color) and even-toned without any redness, bumps, flakes, or patches of moisture. You can take a good sniff while you're at the skin level – does it smell like "dog" or do you smell a yeasty or infection-type smell? These are further signs of allergies, and you might want to evaluate your pet's diet and perhaps consider upgrading. Allergy symptoms can also be alleviated by adding either **Fresh Factors™** or **Longevity™** to your pet's meals. When fed daily, the all-natural antihistamines in these two products provide lasting relief against inflamed, irritated skin. For dry, itchy skin, consider adding **Omega 3-6-9™** or **Skin & Coat** to the diet. Watch as the dry, itchy skin repairs itself and your pet's coat shines with a new luster. Let's think of it like this: Someone who eats fast-food hamburgers and fries every day isn't going to have perfect skin and hair, but if they improve their diet, their acne and greasy hair will clear up.

STOOL APPEARANCE

Stool appearance and consistency are important signs of your pet's overall health. Your pet's stools should be solid and formed but not hard. Coloring will vary depending on what is being fed (if a variety goes in, a variety will come out). You do not want overly soft stools. Also keep an eye open for parasites. Regular stool sample checks by your veterinarian will ensure your pet remains worm-free.

Garlic Is Proven Safe for Dogs

A Japanese study* proves that garlic toxicity is almost impossible to reach.

The Study

The actual amount of garlic fed daily to dogs in the study.

Dose: 1/2 lb. (equal to about 78 cloves) per 100 lbs. body weight is the amount force-fed to study dogs each day for seven straight days. (3 1/2 lbs. total equal to 546 raw cloves per 100 lbs. bodyweight)

Result: Microscopic examination of subject dogs' blood showed oxidative damage to a small percentage of red blood cells. No dog was anemic. No dog was reported to show sickness, weakness, or other negative signs. Researchers guessed that continued feeding would eventually cause anemia. ◆

* Lee, K.W., Yamato, O., Tajima, M., Kuraoka, M., Omae, S., Meade, Y. "Hematologic changes associated with the appearance of eccentrocytes after intragastric administration of garlic extracts to dogs." *American Journal of Veterinary Research*. November 2000. Vol. 61, No. 11, 1446-1450.

NOTE: Springtime, Inc. is not affiliated in any way with the researchers or publishers of this study.

Conclusion: Safe

Dennis Hampt, Owner/President of Springtime since 1979.

In my opinion, it is extremely unlikely that any dog would ever voluntarily eat the amount of raw garlic necessary to reach the minimum toxic dose. Most natural veterinarians who recommend feeding raw garlic stay well under 10% of that amount.

Bug Off Garlic air-dried granules are virtually impossible to overfeed. Raw garlic contains about eight times the amount of allicin (oxidative compound)** found in air-dried garlic powder. Increasing the dose eight times means you'd have to feed more than 4 lbs. of **Bug Off Garlic** per 100 lbs. of body weight per day. Normal usage is less than 1% of that amount. **Bug Off Garlic** is absolutely safe for everyday, year round use. ◆

Dennis Hampt

** Pearson, Wendy. "Garlic (*Allium Sativum*) for Horses: *In Vitro* Antibacterial Activity and *In Vivo* Toxicity." Professor M.I. Lindinger. University of Guelph, 2003.

Toxicity Can Be Confusing

From water to snake venom, the toxicity depends on the dosage.

The toxicity of any substance is dose-dependent. Water is healthy, but drinking excessive amounts of water can lead to fatal hyponatremia (a.k.a. water intoxication). On the flip side, even a very toxic substance such as snake venom has a dose below which there is no detectable toxic effect.

Garlic and Long-Term Health

Five Reasons Why Garlic is Good For Dogs

In her book, *The Healthy Pet Manual – A Guide to the Prevention and Treatment of Cancer*, Deborah Straw explains why garlic is recommended for dogs:

- 1) Garlic has been given to both humans and animals medicinally for more than 4,000 years.
- 2) A study conducted by the National Cancer Institute found garlic to be an effective inhibitor in the growth of cancer cells.
- 3) Garlic can help rebuild the immune system and is a good remedy for the prevention of fleas.
- 4) Selenium, a component of garlic, acts as an antioxidant and activates enzymes which may protect against cancer.
- 5) Veterinary surgeon Buster Loyd-Jones achieved “spectacular” results by giving garlic to dogs.

For more information or to purchase a copy of the book please visit www.innertraditions.com.

Tips for a Happy & Healthy Pet

- Feed your pet a balanced natural diet.
- Take control of home and lawn chemicals your pet may be exposed to.
- Lower your stress (it will help lower your pet's stress, too).
- Spend more time with your pet, as they need our love and care.
- Feed **Bug Off Garlic** and **Longevity™** daily to detoxify and protect your pet.

"...a complete surprise!"

Dear Springtime:

I use your Springtime **Bug Off Garlic** for horses and have seen wonderful results. I look across the street and the neighbors' horses are swatting flies constantly. There are no flies on my horses. Something I noticed that might help promote your product even more is there are no flies on the horse manure in my paddocks or stalls. That was a complete surprise!

Bug Off Garlic for Horses

Real Letters from Real People

Robyn & Pepper

"...I will never switch again!"

Dear Springtime:

I just wanted to let you all know that I absolutely love the **Bug Off Garlic** for horses. This is the second time I have used it and, man, what a difference! Last year, I tried a different bug product, and it didn't do a thing. So I switched back to your product, and I will never switch again!

Just today I went for a beautiful day ride up at Mt. Adams, Washington, and everyone else was having to cover their horses with fly spray, and I didn't have to use any. My horse didn't even swish his tail at all on the entire ride. Super product.

Robyn Perdue, Oregon

"My minis love the Bug Off Garlic!"

Dear Springtime:

My minis love the **Bug Off Garlic**! Here is a photo of one of my miniature horses (who is being trained as a therapy horse) opening the fridge.

Shirley Atkins, Oklahoma

No Spray for Newborn Foal!

Dear Springtime:

Since I live in Florida, bugs are a very big problem, and flies can carry diseases. So I was a nervous wreck when my first foal, Mugz, was born. Of course, I didn't want to have to spray my newborn foal with fly spray, but I didn't want him to get eaten up either. I have always started feeding my horses **Bug Off Garlic** in March to prepare for the high bug seasons, and I noticed when Mugz was born, there were no flies on him.

When the vet got there, he kinda scolded me because he thought I had sprayed Mugz with fly spray. It was only then that I realized that by feeding my mare, Enjoying A Dream, **Bug Off Garlic** while she was pregnant, that it protected her foal when he was born. Thank you!

Dellrie Humphrey, Florida

Bug Off Garlic for Horses

Real Letters from Real People

Parasite Control!!!

Dear Springtime:

To save money in my budget one year, I didn't order the **Bug Off Garlic**. I noticed quite an increase in bot eggs on the horses' coats. Immediately I ordered a supply of the **Bug Off Garlic** and used the product since. My horses are extremely important to me. I like seeing remarkable improvements in the horses' coats, parasite control and a few to no visible bot eggs. I want to thank you for your dedication to produce quality products!

K.S.W., New York

"...flies will alight but do not bite."

Dear Springtime:

We have 24 rescues. The best product we have ever used is the **Bug Off Garlic**. It is a godsend, especially for the mules and donkeys, because they do not stomp their feet normally like the horses do. The flies and gnats bite right to the raw on them, and without using the garlic, we have had to salve them and vet wrap them daily. Once the **Bug Off Garlic** got into their systems, flies will alight but do not bite.

In August, we went camping, and the other campers were really bothered by the flies, but our horses, mules, and donkeys were not bothered at all. We told all the campers about **Bug Off Garlic**.

Thank you so much for a wonderful product.

Garlic: A Safe, Natural Insect Repellent

"...garlic supplements may be able to fight off the ticks and hopefully decrease the risk of Lyme disease.."

Tracey, MS, Elizabeth. "Why the Swedish Army Hopes Garlic and 'Lyme' Don't Mix." WebMD Medical News Archive. 15 August 2000. <http://www.webmd.com/news/20000815/why-swedish-army-hopes-garlic-lyme-dont-mix>

"...there were...fewer tick bites among those that took garlic..."

Brignall, ND, Matt. "Garlic Repels Ticks." Healthnotes: Newswire. 24 August 2000. <http://www.thebetterhealthstore.com/News/Garlic0824.html>

"...our results suggest that garlic may be considered as a tick repellent for individuals and populations at high risk for tick bite, rather than other agents that might have more adverse effects."

Mercola, MD, Joseph. "Garlic Keeps the Ticks Away." Mercola.com. 27 August 2000. <http://articles.mercola.com/sites/articles/archive/2000/08/27/garlic-tick-repellent.aspx>

"It would seem that the powerful compounds such as allicin which garlic releases are inimical to mosquitoes. They have therefore evolved to avoid garlic. Another possibility is that the strong smell of garlic overwhelms the mosquito's sense of smell and prevents them from finding the prey (us!)...Whatever the mechanism, garlic's ability to repel a variety of pests has been proven scientifically."

Mendham, Trevor. "A Natural Mosquito Repellent: Garlic for Mosquito Control." Garlic Central. 2003-2005. <http://www.garlic-central.com/mosquito.html>

Garlic Puts Flies Off Their Feed

Published review by Desirai Schild

My horses will be getting grain seasoned with garlic this fly season. I had heard and read of how adding garlic to a horse's feed would discourage flies from biting them. Late last summer I saw it for myself.

A number of us went on a daylong trail ride through the mountains. As usual, I covered my horse with a long-acting fly spray. I also used a roll-on insect repellent inside her ears and around her eyes. I had applied enough that I felt we rode trailing an insecticide cloud behind us. It was a warm day, so the horses sweated a bit. We also crossed a couple of creeks that came up to the horses' bellies. My mare was stomping her feet and swishing her tail when we tied up for lunch because the fly spray had washed off her legs. I applied more and touched up the roll-on in her ears and around her eyes. I always carry bug spray in my saddle bags.

The real test came at the end of the ride as we gathered in a circle on our horses to discuss our next ride. Four of the five horses were tail swishing and hoof stomping. Dillon, Jane's gelding, stood dozing quietly.

I asked what kind of bug spray she uses and was told she hadn't even purchased a bottle of spray that year. She had switched from insecticide to garlic because Dillon was especially allergic to all types of insects and broke out in welts at every bite. She needed something that worked 24/7.

Jane's herbal choice is **Bug Off Garlic**, available through **Springtime, Inc.** Phone: (800) 521-3212, website: www.springtimeinc.com. There are dozens of other brands available and they may be just as good. I'm going with this one because I've seen it in action.

There have been some rumblings that an excess of garlic can cause anemia in horses. My vets say it would take a lot and advise using garlic supplements as directed, to be safe.

I'd kind of expected a horse treated with garlic to smell like a pizza, but Dillon just smelled like a horse. The **Springtime, Inc.** catalog said parasitic insects have a sense of smell 10,000 time stronger than a human's. That may explain why Dillon attracted no flies, ticks, mosquitoes, or gnats.

Jane estimated the cost of the garlic supplement was about \$50 per horse per season. She starts feeding it in May and continues through September. I probably spend that much in bug spray.

The other benefit is that garlic is a whole lot less potentially toxic than many of the insecticides. I'd certainly opt to use it for mares nursing foals.

As always, ask your vet before starting any additive program. Mine has already given the thumbs-up to **Bug Off**. Besides, I just love the name. ♦

"I asked what kind of bug spray she uses and was told she hadn't even purchased a bottle of spray that year. She had switched from insecticide to garlic..."

Garlic Talk

Common conversations about garlic, the all-natural bug repellent.

In nearly two decades of offering **Bug Off Garlic** to satisfied customers, we have participated in many interesting conversations regarding garlic. The following is a selection of the most common topics:

Garlic safety: Springtime has sold literally tons of garlic a year for almost 20 years and in that time, we have talked to plenty of customers concerning garlic's efficacy, health benefits, and safety for both dogs and horses. There is a lot of misunderstanding about garlic, based on a single study in Japan where four dogs were force-fed extremely large amounts of raw garlic. Garlic preparations vary in chemistry, and the air-dried garlic we use contains very little of the oxidative component that may cause problems if used in excess, so it is gentle and absolutely safe for everyday, year-round use. We feel you may feed our garlic with complete confidence.

Garlic for pregnant, nursing, and newborn animals: Many of garlic's nutritional and protective properties are passed on from the mother to the baby during gestation. The customers who have had the best experiences with nursing animals and garlic (see page 21) have introduced it very slowly, taking at least 10 days to ensure acceptance. Foals or puppies can be fed garlic as soon as they are weaned. Many breeders report great results with this.

Garlic for animals other than dogs and horses: Our customers have used garlic successfully on miniature horses, donkeys, goats, sheep, rabbits, alpacas, llamas, deer, and cats as well as many other farm animals. You can calculate the correct dose by body weight according to the dog recommendations for smaller animals or the horse recommendations for the larger animals.

Garlic granules with dry food: Customers who feed grain, pelleted feed, or kibble have developed various strategies to prevent garlic granules from falling to the bottom of the bucket or bowl. For horses, customers have often reported using a spray bottle filled with water to lightly coat the feed before sprinkling the garlic on with great success. For dogs, mixing the granules with a little bit of a favorite canned dog food or a wet treat, such as plain yogurt, liverwurst, or peanut butter, often helps.

Garlic for picky or finicky eaters: When introducing garlic to an animal, we have seen the following strategies for dogs and horses work effectively:

1. **For dogs**, starting off slowly is also key. In addition, adding a tasty treat, such as a little peanut butter, liverwurst, cottage cheese, yogurt or canned dog food, is also helpful.
2. **For horses**, start off VERY slowly, sprinkling a teaspoon or less on the feed (using a spray bottle filled with water if necessary) and sprinkling the garlic around the feed area on the ground. When the horse begins to accept the aroma of the feed, it is safe to increase the dosage slowly.

We suggest feeding **Bug Off Garlic** year-round for picky companion animals. Feeding **Bug Off Garlic** continually is much easier (even at a lowered dosage in the off-season) than trying to re-introduce it in the spring.

Garlic as a dewormer or heartworm preventative: Although **Bug Off Garlic** is helpful in reducing both internal and external parasites, you may wish to consult your practitioner for these issues. For a list of holistic veterinarians in your area, you can visit the American Holistic Veterinary Medical Association online at <http://www.ahvma.org/> ♦

SPRINGTIME'S TERMS AND CONDITIONS

60-DAY RETURN POLICY – If you are not happy with any product, simply return it within 60 days for a credit or refund. No questions asked. (Returns are subject to prorated refund). Shipping fees are non-refundable.

24-HOUR ORDERING – Please visit www.springtimeinc.com for secure online ordering, current specials and email sign-up. Or, you may call us toll free at 1-800-521-3212. If you call us after business hours, please feel free to leave your order on the answering service. If you prefer a real person, just leave your name and number and we'll call you back. Our office is open Monday through Friday, 8:30 a.m. to 5:00 p.m., Eastern Time.

\$8.00 GROUND SHIPPING PER ADDRESS FOR ORDERS UNDER \$75.00 – Orders under \$75.00 delivered to any street address in the lower 48 states for an \$8.00 flat fee. If shipping to multiple addresses, please add an additional \$8.00 per address. Shipping is FREE for orders \$75.00 and over.

Estimated FedEx Ground Delivery

SPRINGTIME'S STANDARD SHIPPING AND HANDLING

(Ground Shipping Per Address to 48 States - **Springtime** may choose a preferred shipper: *FedEx or UPS)

TOTAL ORDER	SHIPPING/HANDLING CHARGES
Under \$75.00	\$8.00
\$75.00 & Up	FREE

***FedEx Home Delivery runs Tuesday through Saturday.**

This map illustrates service expectation schedules in business days for FedEx Ground shipments.

SAME DAY SHIPPING TO 48 STATES – 99% of orders received by 2:00 p.m. ET are shipped that day FedEx ground. Please note that FedEx & UPS require a “street address” and cannot deliver to a P.O. Box. Expedited shipping is available at an extra charge (please call for rates at 1-800-521-3212). If orders are placed during weekends or holidays, they will be shipped the next business day.

ALASKA, HAWAII AND CANADA – Now accepting orders online to Alaska, Hawaii and Canada via USPS.

Discounted rates based on weight of the package. For shipments to other countries, please call our office at 1-800-521-3212 for rates.

NO MINIMUM ORDER – No minimum order required to ship. Let us prove to you what thousands of customers already know – Springtime beats all competition for quality, service, and value.
